Book Descriptions:

We have made it easy for you to find a PDF Ebooks without any digging. And by having access to our ebooks online or by storing it on your computer, you have convenient answers with computer programming lab manual download . To get started finding computer programming lab manual download , you are right to find our website which has a comprehensive collection of manuals listed. Our library is the biggest of these that have literally hundreds of thousands of different products represented.

TECHNOLOGY
SIRUGANUR, TRICHY

OS LAB MANUAL

II B.Tech(IT) / IV SEMESTER

Prepared by,

S.NAZREEN,B.E.

To browse Academia.edu and the wider internet faster and more securely, please take a few seconds to upgrade your browser. SCHEME OF INSTRUCTION By Yashwant Sooda READ PAPER Download pdf. Download link for EEE 2nd SEM GE6263 COMPUTER PROGRAMMING Lab Manual is listed down for students to make perfect utilization and score maximum marks with our study materials. It is considered as the brain of the computer. It controls and coordinates the internal activities of the computer and provides user interface. The computer system is built with the following general components. Hardware Application Software. Operating System i Hardware This includes the physical components such as CPU, Keyboard, Hard disk and Printer. ii Application Software These are the programs that are used to accomplish specific tasks. iii Operating System It is the component or the set of programs to manage and control the hardware as well as coordinate the applications. Each system must have at least have the hardware and the OS. Functions of an Operating System. Command interpretation The CPU cant understand the commands keyed in by a user. It is the function of the OS to make it understand. Peripheral Interfaces The OS also has to take care of the devices attached to the system. The OS oversees communication between these devices and the CPU. Memory management The OS handles the extremely important job of allocating memory for various processes running on the system. CPU time would then have to be rationed out by the OS to ensure that no programs get more than its fair share of the processor time. Here I am publishing the first version of the lab manual which has solutions and sample output for all the lab programs. Gradually more documentation and algorithms are planned to be added. Anybody can contribute and

1. Using circular representation for a polynomial, design, develop, and execute a program in C to accept two polynomials, add them, and then print the resulting polynomial.

Description:

A **Polynomial** is can be expressed in terms that only have positive integer exponents and the operations of addition, subtraction, and multiplication.

A **polynomial equation** is an equation that can be written in the form

$$ax^s + bx^{s-1} + \dots + rx + s = 0, \text{ where } a, b, \dots, r \text{ and } s \text{ are constants.}$$

We call the largest exponent of x appearing in a non-zero term of a polynomial the **degree** of that polynomial.

Examples

1. $3x + 1 = 0$ has degree 1, since the largest power of x that occurs is x^1 . Degree 1 equations are called **linear equations**.

2. $x^2 - x - 1 = 0$ has degree 2, since the largest power of x that occurs is x^2 . Degree 2 equations are also called **quadratic equations**, or just **quadratics**.

3. $x^3 = 2x^2 + 1$ is a degree 3 polynomial (or **cubic**) in disguise. It can be rewritten as $x^3 - 2x^2 - 1 = 0$, which is in the standard form for a degree 3 equation.

4. $x^4 - x = 0$ has degree 4. It is called a **quartic**.

Simplify $(3x^3 + 3x^2 - 4x + 5) + (x^3 - 2x^2 + x - 4)$

Can be added horizontally:

$$\begin{aligned} (3x^3 + 3x^2 - 4x + 5) + (x^3 - 2x^2 + x - 4) \\ = 3x^3 + 3x^2 - 4x + 5 + x^3 - 2x^2 + x - 4 \\ = 3x^3 + x^3 + 3x^2 - 2x^2 - 4x + x + 5 - 4 \\ = 4x^3 + 1x^2 - 3x + 1 \end{aligned}$$

...or vertically:

$$\begin{array}{r} 3x^3 + 3x^2 - 4x + 5 \\ x^3 - 2x^2 + x - 4 \\ \hline 4x^3 + 1x^2 - 3x + 1 \end{array}$$

Program:

```
#include <malloc.h>
#include <conio.h>
#include <stdio.h>
```

```
struct link
{
    int coeff;
```

The document has been typeset using the LATEX document preparation system. A nice tutorial is provided here to get started with GCC. CodeBlocks uses the GNU GCC compiler collection. Two other good IDEs that you can try or Eclipse and Anjuta. I have provided links to this IDEs below you can click and download the necessary software and instructions to set up a working environment. The Lab is well equipped with all advanced software's for practical applications. Sangrur PB Pin 148031. The code will work on all operating systems may be its Linux, Mac or any other and compilers. To learn a programming language you must start writing programs in it and may be your first c code while learning programming. Output of program 2C program print integer This c program first inputs an integer and then prints it. Input is done using scanf function and number is printed on screen using printf. For example if the user entered two numbers as 5, 6 then 11 will be printed on the screen. As you have study in mathematics that in decimal number system even numbers are divisible by 2 while odd are not so we may use modulus operator% which returns remainder, For example 4%3 gives 1 remainder when four is divided by three. Consider an integer n we can first divide by 2 and then multiply it by 2 if the result is the original number then the number is even otherwise the number is odd. These are some logic which may help you in finding if a number is odd or not. Numbers are assumed to be integers and will be entered by the user. So we convert denominator to float in our program, you may also write float in numerator. This explicit conversion is known as typecasting. Arithmetic operations. Output of program 7 C program to check whether input alphabet is a vowel or not This code checks whether an input alphabet is a vowel or not. Both lowercase and uppercase are checked. HCF is also known as greatest common divisorgcd or greatest common factorgcf. Size of integer is assumed to be 32 bits. We use bitwise operators to perform the desired task. We right shift the original number by 31, 30, 29,, 1, 0 bits using a loop and bitwise AND the number obtained with 1one, if the result is 1 then that bit is 1 otherwise it is 0zero. We create a function which returns a pointer to string which is the binary of the number passed as argument to the function.

Firstly user will enter a number indicating how many numbers user wishes to add and then user will enter n numbers. In the first c program to add numbers we are not using an array, and using array in the second code. For example if user enter 123 as input then 321 is printed as output. In our program we use modulus% operator to obtain the digits of a number. To invert number look at it and write it from opposite direction or the output of code is a number obtained by writing original number from right to left. To reverse large numbers use long data type or long long data type if your compiler supports it, if you still have large numbers then use strings or other data structure. For example some palindrome numbers examples are 121, 212, 12321, To check whether a number is palindrome or not first we reverse it and then compare the number obtained with the original, if both are same then number is palindrome otherwise not. C program for palindrome number is given below. Palindrome number algorithm 1. Get the number from user. 2. Reverse it. 3. Compare it with the number entered by the user. 20 4. If both are same then print palindrome number 5. Else print not a palindrome number. These codes illustrate how to create various patterns using c

programming. Most of these C programs involve usage of nested loops and space. A pattern of numbers, star or characters is a way of arranging these in some logical manner or they may form a sequence. Some of these patterns are triangles which have special importance in mathematics. Some patterns are symmetrical while others are not. Using the code below you can print as many number of terms of series as desired. Numbers of Fibonacci sequence are known as Fibonacci numbers. This sequence has many applications in mathematics and Computer Science. This code implements insertion sort algorithm to arrange numbers of an array in ascending order. With a little modification it will arrange numbers in descending order.

We show you three different methods to reverse string the first one uses `strrev` library function of `string.h` header file and in second we make our own function to reverse string using pointers, reverse string using recursion and Reverse words in string. Output of program 30 C program to print Pascal triangle Pascal Triangle in C C program to print Pascal triangle which you might have studied in Binomial Theorem in Mathematics. Number of rows of Pascal triangle to print is entered by the user. Practical s Syllabus. Contents Manipulating Characters It is usually 8 bits. Precedence Rules from highest to lowest priority However, depending On wellordering and induction a Prove the induction principle from the wellordering principle. b Prove the wellordering The list of keywords used in standard C are unsigned void A token is the smallest element of a C program that is meaningful to the compiler. The C compiler recognizes the following kinds of For all problems, a sequential implementation is given, Recursion offers an alternative mechanism, considered by many to be more Proposed scheme for B.Sc Programme under Choice Based Credit System Write the numbers 1 N. Assume the following specification One of the simplest concepts is prime numbers. There is no other reason than that. There is nothing special otherwise about Due Tuesday, November 2th at the beginning of the class Reminder the work you submit must be your own. C supports two categories A Review of ANSI C and Considerations for Embedded C Programming. Basic features of C Show the exact output produced by the algorithm.

Assume that the initial call is `prob3root` After working D Roychoudhry Department of Computer Science and Engineering Indian Institute of Technology, Kharagpur D Roychoudhry Department of Computer Science and Engineering Indian Institute of Technology, Kharagpur Lecture 04 Digital Logic II May, I before starting the today s lecture CSE 215, Foundations of Computer Science Stony Brook University I wrote it for myself and other kids who are on the team.
